

AXIS Camera Explorer

Visionary Software for Real Explorers!

AXIS Camera Explorer is software that enables live video imaging directly in Windows Explorer. Installing onto a single computer client, it provides a quick and easy method for accessing Axis network cameras and video servers – and the images they generate.

Using Windows Explorer as the interface, AXIS Camera Explorer offers simple and effective functions for viewing live movies, snapshots, and video feeds from Axis video resources over the network. Simply 'Add' Axis cameras and video servers to your imaging desktop by defining their respective IP Address in a Wizard. An unlimited number of network cameras and video servers are conveniently displayed as logical objects within the Explorer.

Clicking any camera object in the left hand window of the Explorer displays the respective video stream in the right. The software also allows simple sequence editing and the creation of AVI-files that can then be conveniently distributed as a single file attachment in electronic mail applications.

- Video streams viewed in Explorer at the click of a button
- Creates movies as single AVI files for convenient distribution and easy playback.
- Develops live video sites featuring images from any Axis camera and video resource on the network.
- Allows users to explore, open, and access; configuration pages, albums, and live video sites
- Enables in-image control of connected Pan/Tilt/Zoom devices.

Technical Specification - AXIS Camera Explorer

Installation Overview

- Insert the AXIS Camera Explorer CD into the local drive on your computer to autostart the installation.

System Requirements

- ACE uses the standard Internet TCP/IP suite of protocols and can be used on:
- Windows 95 with Winsock2
- Windows 98/ME
- Windows NT/2000 platforms
- Internet Explorer 4.0, or later

Hardware Requirements

- Minimum: 300MHz Pentium II CPU
- Recommended: 600MHz Pentium III CPU with at least 128MB free RAM.

Additional Software

- ACE installs as a component add-on to Windows Explorer -- with no other client software required to view images.

Configuration and Management

- Simply right-click the corresponding icons in the left pane of the Explorer for instant access to the configuration pages of all Axis Network Camera and Video Server products on the network.

Video Resolution

- Variable drag-and-drop window sizes, available for the following image resolutions: 320 x 240, 640 x 480

Viewing Clients

- An unlimited number of camera objects can be defined and viewed within a single Explorer session.
- Limited to four simultaneous sessions.

Software Upgrades

- Software updates are available free of charge from the ACE product pages at www.axis.com.

Product Warranty

- A one-year warranty is included.
