Overview

The HP StorageWorks 2000fc G2 Modular Smart Array (MSA2000fc) represents the newest Fibre Channel model of the MSA2000 family (which includes the MSA2000i G2 iSCSI and the MSA2000sa G2 SAS connected models), a new generation of HP storage arrays specifically designed for entry-level customers and features the very latest in functionality and technology at highly affordable price points.

The MSA2000fc G2 is a 4 Gb Fibre Channel connected 2U storage area network (SAN) or direct connect solution (OS dependent) designed for small to medium size departments or remote locations. The controller-less chassis is offered in two models - one comes standard with twelve Large Form Factor (LFF) 3.5-inch drive bays, the other can accommodate twenty-four Small Form Factor (SFF) 2.5-inch drives (common with ProLiant). Both are able to simultaneously support enterprise-class SAS drives and archival-class SATA drives. The chassis can have one or two MSA2300fc G2 controllers.

The MSA2000fc G2 is all about the ability to choose the proper configuration to fit individual needs. The user can opt for the 24-drive bay SFF chassis for the highest spindle counts in the most dense form factor, or go for the 12 drive bay LFF model to max out total capacity. Choose a single controller unit for low initial cost with the ability to upgrade later; or decide on a model with dual controllers for the most demanding entry-level situations. Capacity can easily be added when needed by attaching additional drive enclosures. Maximum capacity ranges with LFF drives up to 36 TB SAS or 120 TB SAS MDL or SATA with the addition of the maximum number of drive enclosures. Configurations utilizing the SFF drive chassis and the maximum number of drive enclosures can grow to 29.7 TB of SAS or 49.5TB SAS MDL or SATA MDL with a total of ninety-nine drives. The MSA2000fc G2 has been fully tested up to 64 hosts.NOTE: There are no additional hidden charges, licenses or fees as you add enclosures or hosts and users.

The new Fibre Channel G2 model has grown in other aspects too. Optional snapshot capability has been increased to 255 snaps on the G2 models, and LUN support has grown up to 512 total volumes in a Dual Controller system. The MSA2000fc G2 also adds support for HP-UX, OpenVMS, Windows, and Linux on powerful Integrity servers.

The MSA2000fc G2 is a member of HP StorageWorks Modular Smart Array offerings, delivering simple and affordable storage technology to meet today's demanding and growing IT needs. These storage solutions offer excellent price/performance and availability features for direct attach configurations (depending on OS), clusters, workgroups and entry-level SAN environments. Each solution is designed to be easy to deploy, to be secure, along with low management costs, while driving rapid return on investment.

Product Technology	4 Gb Fibre Channel technology	Two host ports per controller, shipped with SFPs. the MSA2000fc G2 controller can run in either point-to-point or FCAL (loop). The default is FCAL which is used in Direct Connect, particularly with two controllers. The PtP (fabric) mode is used with almost all switches.
	Modular Chassis	2U rack height. 12 Large Form Factor or 24 Small Form Factor drive bays, accommodating SAS and SATA. Comes with space for one or two controllers, or MSA2000 3.5-inch disk Enclosure I/O modules (LFF chassis only)
	Drives available	The new MSA2000fc G2 controller supports either the MSA2 3.5-inch Large Form Factor (LFF) drives, or the HP ProLiant 2.5-inch Small Form Factor (SFF) drive Serial Attached SCSI (SAS) enterprise-class drives designed for high volume, 24x7 usage. SAS MDL and SATA MDL are usually reserved for archival of data as they are

Family Information

both relatively inexpensive and are available in very large capacities.
The MSA2000 family of arrays can accommodate SAS, SAS MDL and SATA drives within the same enclosure making it ideal to have both business-critical, high activity files on SAS drives while using Snapshot or clone capability to keep back-up or archival data on the less expensive drives.

For investment protection, the MSA2300fc G2 controller will support single port SAS & SATA drives in a single-domain MSA70. This support allows current owners of MSA70s to migrate their single port drives (in their MSA70 only, not into the array head) to be attached to an MSA2300fc. They can only cascade to another single I/O MSA70. This is not a data-in-place transition.

SAS drive performance can be approximately 30% greater than SATA performance on sequential host I/O. SAS performance excels in sequential lower latency response time and random I/O per second transaction performance due to higher rpm disk speeds yielding lower seek times. SAS drive random performance is generally twice that of SATA drives.

NOTE: MSA2 3.5-inch Large Form Factor (LFF) drives are for use only in the MSA2000 family. The 2.5-inch Small Form Factor (SFF) drives are supported only with the MSA2300fc G2 controller and are common with and are the same part numbers as the ProLiant optional 2.5-inch drives.

Optional Disk enclosures Just as the user has a choice of chassis for the array head (LFF and SFF drive bays), so also do they have a choice of expansion disk enclosures accommodating either drive size. (NOTE: these are not supported as part of a NEBS-certified with the MSA Carrier Grade Chassis.)

MSA2000 3.5-inch drive enclosure. This 2U unit has twelve LFF (3.5-inch) drive bays and accepts for MSA2 dual-ported SAS and SATA drives. One model (AJ749A) has a single I/O module that matches with a single controller array head, giving a single path to the drives. The second model (AJ750A) comes standard with two I/O modules installed, required when paired with a dual controller array head, giving two paths to the drives for higher availability.

- This 3.5-inch drive enclosure can be attached to either the MSA2312fc G2 or MSA2324fc G2 array head. In addition it continues to support the MSA2000i and MSA2000sa.
- Each model ships standard with two .6m SAS to SAS cables for cascading to other MSA2000 drive enclosures
- For connection to either form-factor MSA2300fc array head, miniSAS to SAS cable(s) must be purchased.
- The single I/O model can be upgraded to a dual model with the purchase of an additional MSA2000 Drive Enclosure I/O module (AJ751A). No cable is included with this upgrade.
- Up to four MSA2000 3.5-inch enclosures can be attached to an MSA2300fc G2 controller in the array head.

MSA70 2.5-inch drive enclosure. This 2U storage enclosure (418800-B21) is designed to support twenty five ProLiant 2.5-inch Universal form factor (SFF) SAS or SATA hard drives. It ships standard with a single I/O module installed.

- This 2.5-inch drive enclosure can only be attached to an MSA2324fc G2 controller (SFF) array head. It can also be attached to the MSA2312fc (LFF) or the MSA2000i G2 or MSA2000sa G2 models. The latest firmware is required.

Family Information

- The MSA70 enclosure ships with a single .5m miniSAS to miniSAS cable.
- To support a dual controller MSA2124fc G2 array head, the user needs to purchase and install an MSA70 Dual Domain I/O Module (AG779A). This option ships standard with an additional .5m miniSAS to miniSAS cable.
- Up to three MSA70s may be attached to the array head, given total support for 99 SFF drives.

Scalability

The MSA2300fc G2 controller is designed to allow an installation to begin with smaller capacity and be able to grow gradually as needed. The flexibility of SAS or SATA drive technology, form factors, sizes, speeds, and costs per GB allows a system to easily fit in almost any budget.

- Large Form Factor configurations can scale up to 7.2 TB SAS or 24 TB SAS MDL or SATA, expandable to 36 TB SAS or 120 TB SAS MDL or SATA with the addition of a maximum of four MSA2000 3.5-inch Drive Enclosures.
- Small Form Factor configurations can scale from 7.2 TB SAS, 12TB SAS MDL or 6 TB SATA. With the addition of three MSA70 JBODs, the MSA2324fc G2 can support 29.7 TB SAS, or 49.5TB SAS MDL or SATA MDL.
- Users may configure a 24-drive MSA2324fc G2 SFF array head with up to three 12-drive LFF MSA2000 3.5-inch disk enclosures. This is an excellent method for a configuration that support fast SFF enterprise-class SAS drives in the array head, combined with economical LFF drives staged for archival purposes, all in the same array.
- Qualification of larger capacity drives is ongoing.

LUNs

The MSA2000 family of arrays supports 512 LUNs (total volumes in a dual controller system) and LUN sizes up to 16 TB. The array supports expansion and deletion of any LUN.

RAID 0, 1, 3, 5, 6, 10, 50

In addition to the usual RAID levels, the MSA2000 family features several important additional levels. RAID 6 is the highest level of RAID protection. It allocates two sets of parity data across drives and allows simultaneous write operations. It can withstand two simultaneous drive failures without downtime or data loss. RAID 10 is mirroring and striping without parity. It is the most popular of the multiple RAID levels, allowing large arrays with high performance in most cases and superior fault tolerance. RAID 50 combines the block striping and parity of RAID 5 with the straight block striping of RAID 0, yielding higher performance than RAID 5 through the addition of RAID 0, particularly during writes.

Performance

Performance numbers are a guideline as established by tests using RAW I/O in an Operating System Agnostic test lab environment. A total of 96 72GB 15K SAS drives were used in a dual controller configuration of eight 12 Disk vdisks, eight 806 GB volumes, and two volumes per host. Four hosts directly attached to the MSA2000fc G2 were used in this test configuration (results cannot be expected with a single host). Results were achieved in Sequential Writes with 256K blocks; all random tests were based on 8K block sizes.
NOTE: Number and type of applications, drive type and number of drives, operating system used, and the number of hosts will affect overall performance.

DC-power chassis	HP is making the two models of controller-less chassis available with direct current (DC) power supplies. They each have the two empty bays where users can insert one or two MSA2300fc G2 controller(s). In addition, the MSA2012 LFF drive bay can have MSA2000 3.5-inch I/O modules inserted to create a LFF DC-power JBOD. The 500 watt power supply is designed to operate over the input range of -40VDC to -75VDC. This is specifically intended to conform to Telco requirements. Certification is in process but no claims are made at this time.

HP Insight Control Storage Module for vCenter	HP Insight Control Storage Module for vCenter HP Insight Control Storage Module for vCenter allows customers who are using vCenter to better monitor and manage the storage associated with VMware virtual machines. HP StorageWorks can be added to vCenter, allowing vCenter administrators to list LUN/volume connections, determine the storage attributes associated with virtual machines, and monitor the status and health of the arrays. Features and Benefits: 1. Monitor the status and health of HP StorageWorks arrays: Administrators managing their virtual machine environment can get additional information about the health and status of their HP arrays. This information helps in diagnosing problems, and communicating with storage administrators on the various storage requirements for the virtualized environment. 2. Manage LUN / volume connections from VMs and ESX servers to the arrays: As administrators manage virtual machines, it is often very important that they know exactly what storage is connected to each, and the location and attributes of that storage within the SAN. This allows for much more intelligent decisions about VM movement and placement, and also an increased understanding of what kind of storage is being used.

Family Information

3. Understand which storage features are available: Often when allocating storage for a virtual machine administrators need to match the characteristics of the VM with the attributes of the storage. A great example is that a "critical" VM would need highly available storage, whereas a "temp" VM could use non-protected storage. This feature will tell the administrators what "type" of storage is available to simplify their communication with the storage administrator (or to easily make the change themselves in smaller businesses).

HP StorageWorks Storage	HP StorageWorks Storage Mirroring Software provides host-based, continuous replication for customers

Optional Software

Mirroring

seeking a low-cost alternative to fabric or array-based replication. Patented replication and failover technology continuously captures byte-level data changes as they happen and replicates those changes to one or more target servers at any location without geographic limitations. By replicating only the bytes that change, Storage Mirroring Software uses the absolute minimum bandwidth on your existing LAN or WAN to replicate your data. Storage Mirroring also provides server failover where a production server can automatically be 'replaced' by the storage mirroring server in the event of failure. Couple Storage Mirroring with MSA2000 Snapshots and/or Volume Copy to achieve an Enterprise class data protection strategy creating different data recovery points using continuous data protection with Storage Mirroring and point-in-time data protection with Snapshots and/or Volume Copy.
Storage Mirroring Software supports:

HP StorageWorks X3000 Network Storage Gateways:

Add more value to your MSA array

Stretch your MSA2000 array investment by adding file & print services, iSCSI connectivity, and management hosting with an X3000 Series Network Storage Gateway platform. X Series Network Storage Gateways are optimized file and print server solutions that are built on industry-standard HP ProLiant servers and come with Microsoft Windows Storage Server 2008 operating system pre-installed. Since they're Windows-based, network integration is easy, your tools and data protection applications run right on the box, and management has a familiar look and feel. Like many Network Attached Storage (NAS) devices, they support heterogeneous file serving environments and are pre-configured to install in minutes.
An X3000 Network Storage Gateway is a file/iSCSI gateway that adds IP-based services to your Fibre Channel array or SAN. So it not only enhances your MSA investment with file and print services, but it helps you save even more by enabling tiered (Fibre Channel and iSCSI) block access for application servers. All of your important client and server data can be managed, scaled, and protected on a single MSA2000 array.
