

VERITAS Backup Exec™

for NetWare

Options

VERITAS Backup Exec SAN Shared Storage Option centralizes management and storage across a storage area network (SAN) and provides high performance LAN-free backup.

Calendar View Scheduler allows easy viewing of scheduled jobs and backup operations.

"Novell is dedicated to providing its customers with reliable and secure applications for its industry-leading NetWare and eDirectory platforms, and VERITAS Software has provided superior level data protection services for not only our internal directory enabled, mission-critical systems but also for our NetWare customers."

— Carleton Watkins
Director of Worldwide Developer Support
Novell, Inc.

Redefining NetWare Data Protection

VERITAS Backup Exec™ is the system of choice for high performance, reliable NetWare data protection — and the most comprehensive solution for growing networks. VERITAS Backup Exec incorporates database protection with storage management options for today's highly specialized networking environment, which may include demanding storage subsystems. VERITAS also provides options for rapid recovery from server disaster and comprehensive backup of open files.

VERITAS Backup Exec™ for NetWare Options

- Remote Agent for NetWare
- Remote Agent for Windows NT and Windows 2000
- Library Expansion Option
- Intelligent Disaster Recovery Option™
- SAN Shared Storage Option™
- Open File Option

NEW! Remote Agent — Engineered for Maximum Performance

The Remote Agent, with VERITAS' exclusive Agent Accelerator technology, is performance-optimized to protect remote NetWare servers. A new agent supports Windows NT and Windows 2000 servers and allows the use of Backup Exec for Windows NT and Windows 2000 options to protect open files. Through its distributed processing and source compression, Backup Exec Remote Agents minimize network traffic, maximize performance and significantly reduce backup time.

NEW! Library Expansion Option — expands storage capacity by adding support for additional drives within tape library(s). The advanced capabilities of the VERITAS Backup Exec Library Expansion Option are ideally suited for unattended "lights-out" enterprise backup and restore operations, including fault-tolerant device pooling, scheduled cleaning operations, barcode reader and portal support. Backup Exec Library Expansion Option offers a broad range of support and device compatibility.

Intelligent Disaster Recovery Option — provides a simplified "point-in-time" recovery solution for both local and remote NetWare 4.2 and 5.x servers that may have been physically damaged or reconfigured during an upgrade. Using either the diskette-based, CD-R/W or bootable tape solutions, the Intelligent Disaster Recovery Option reduces downtime in the event of server failure, allowing you to restore from your last complete backup set — including full, incremental, differential and working set backups. An automated, step-by-step process allows you to get your system back to the state of your last backup, by

selecting defaults or allowing you to reconfigure it, so you control the recovery operation in the manner best suited to your needs.

SAN Shared Storage Option — provides the industry's first heterogeneous storage area network solution that allows tape libraries connected over a fibre-channel SAN to be shared dynamically between multiple NetWare 4.2, 5.x and 6.x, Windows NT or Windows 2000 VERITAS Backup Exec servers. The drives are connected to each host via enabling hardware, such as switches or hubs. SAN Shared Storage Option provides LAN-free backup to increase backup performance and LAN bandwidth for user applications.

Open File Option — ensures that every file on your NetWare 4.2, 5.x (non-Novell Storage Services [NSS] volumes) and Windows NT/Windows 2000 servers is protected even if in use. This option can handle open files at the volume level and is seamlessly integrated into VERITAS Backup Exec. No need to know which files are open ahead of time, just set a scheduled backup to use this option with a simple mouse click.

Product	SKU	Licensing (Licensed Per)	Application/OS Version(s) Support
Remote Agent for NetWare 1-pack 3-pack	E02646D E02647D	Server	NetWare 4.2, 5.x and 6.x
Remote Agent for Windows NT/Windows 2000 1-pack 3-pack	E02648D E02649D	Server	Windows NT 4 and Windows 2000
Library Expansion Option (replaces Advanced Autoloader Option and SAN Shared Storage Option additional Shared Backup Drive)	E02651D	Drive in library (first drive is free)	See Device Support List at: www.veritas.com
Intelligent Disaster Recovery Option	E02652D	Backup server	NetWare 4.2 and 5.x, includes NSS Volumes
Intelligent Disaster Recovery Option Additional Remote License	E02650D	Additional server	NetWare 4.2 and 5.x, includes NSS Volumes
SAN Shared Storage Option	E02671D	Backup server	See Device Support List at: www.veritas.com
Open File Option for NetWare	E02653D	Server/workstation	NetWare 4.2 and 5.x, non NSS Volumes
Open File Option for Windows NT/Windows 2000	E01731A	Server/workstation	Windows NT 4 and Windows 2000

About VERITAS: VERITAS Software Corporation (Nasdaq:VRTS) provides essential data availability software solutions that enable customers to protect and access their business-critical data for business without interruption.
