TREND MICRO

InterScan™

Virus protection and email management for the Internet gateway

for Windows NT* Server

INTERNET GATEWAY PROTECTION AND CONTENT MANAGEMENT

InterScan VirusWall™ provides scalable, high-performance, three-in-one (HTTP, SMTP and FTP) Internet gateway protection against viruses and malicious code. InterScan installs on the gateway server and runs on both UNIX and NT (Windows 2000).

Integration with the Trend Virus Control System (TVCS) means that Internet gateway protection can be managed as an integral part of an enterprise-wide antivirus effort. The optional eManager™ adds spam blocking, content filtering and email scheduling.

► Detects and removes viruses from inbound and outbound SMTP email and attachments, FTP and HTTP traffic—in real time

► Sends customised warning messages to sender, recipients and administrator

► Automatic, scheduled or one-button pattern file updates provide multiple ways to keep protection current

► Flexible configuration and Internet-enabled management provides immediate administration access

► Tracks infections through a detailed activity log

► Fully compatible with Check Point, Lucent, Cisco and other popular firewalls

► Blocks unsolicited email (spam)

" VirusWall stands far above its competition [with its] overall reliability and trustworthiness making it the obvious winner. "
— *Network Week Reviewers*, April 1999

TREND MICRO™

your Internet VirusWall™

Intelligent virus scanning

Trend Micro's virus scanning engine incorporates both rules-based and pattern recognition technology to detect and clean known and unknown viruses.

► Scans inside files compressed with all major compression algorithms

► Includes MacroTrap™, Trend Micro's macro virus scanning engine that detects and removes known and unknown macro viruses

Automatic web-based virus pattern updates

Provides the latest web-based updates from Trend Micro's website, either automatically or manually via a one-click function.

Easy-to-manage robust activity log

► Maintains a comprehensive activity log, providing details on each infected file and attempted security violation. Logs include the origin, name and destination of infected files, the date files were received, the identity of viruses found and the action taken to prevent harm from malicious code.

► Allows administrators to easily track and deal with the problem sources

Firewall integration

► Flexible setup supports any network topology, including installation on the firewall machine or on a separate Internet content security server

► Uses Check Point's Content Vectoring Protocol or Lucent's Content Scanning Protocol APIs for direct, seamless integration

► Start scanning by simply adding the InterScan virus scanning service to the firewall's rules base—without interrupting network traffic flow
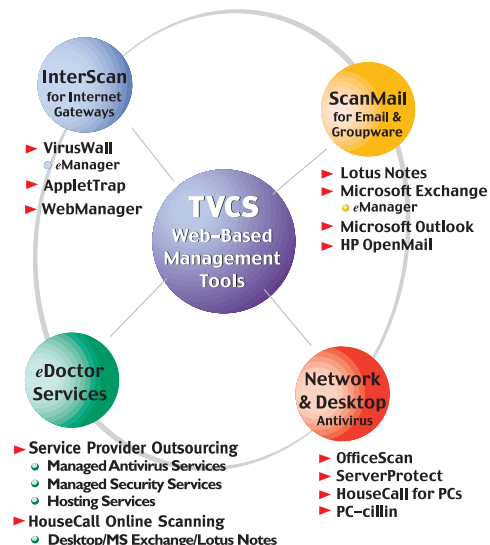

► Compatible with most popular firewalls

Managing email problems

► Prevents hackers and spammers from using your SMTP server to relay bulk email

► eManager optional plug-in module gives administrators intelligent, profile-based control over their email systems:

  ■ *Spam Filter*
    • Blocks unwanted email at the Internet gateway
    • Spam source-list is customisable and updated automatically

  ■ *Content Filter*
    • Prevents confidential, inappropriate or malicious email information from entering or leaving the organisation

  ■ *Email Manager*
    • Monitors and graphs email traffic patterns
    • Postpones delivery of messages with large attachments to off-peak hours

Evaluate InterScan VirusWall for NT

Test drive fully functional Trend Micro products through the Internet at Trend Micro's Virtual lab. The Virtual Lab is at http://virtual-lab.antivirus.com.

All Trend Micro products can be downloaded for evaluation from Trend Micro's website or order a free CD at www.trendmicro.co.uk/download.

InterScan for Internet Gateways

Technical support

Trend Micro provides extensive after-sales technical support via our website, email and telephone. Customers are entitled to free virus pattern and program updates for a period of one year, and can access a database of technical support questions and answers via the web. Newsletters that contain the latest virus information are available on the web or via email, and electronic product documentation files can be downloaded for free.

For more information about technical support available to Trend Micro's customers, visit http://www.trendmicro.co.uk/support

About Trend Micro

Trend Micro (UK) Limited provides centrally controlled server-based virus protection and content-filtering products and services. By protecting information that flows through Internet gateways, email servers, and file servers, Trend Micro allows companies worldwide to stop viruses and other malicious code from entering at any point before they ever reach the desktop. More information about Trend Micro is available at http://www.trendmicro.co.uk.
